

Enabling Developer Options

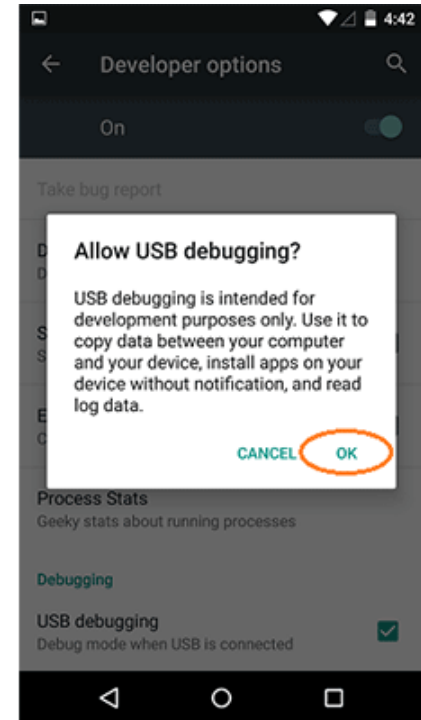

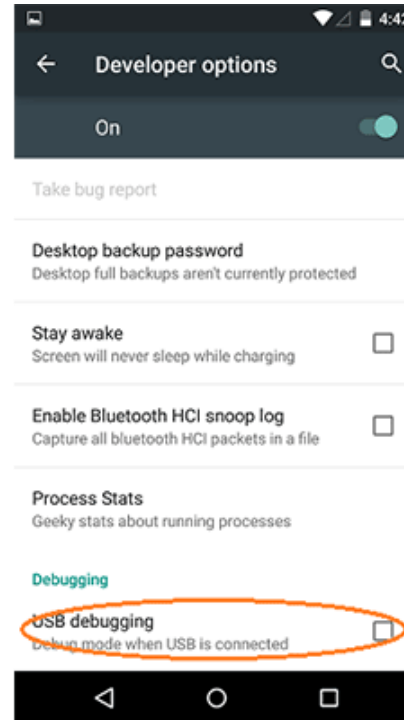

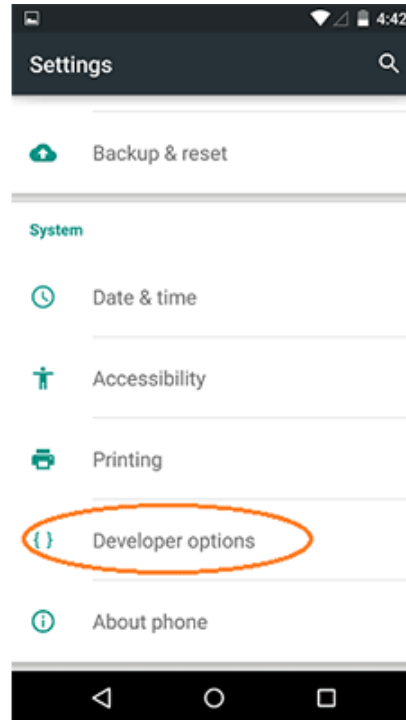

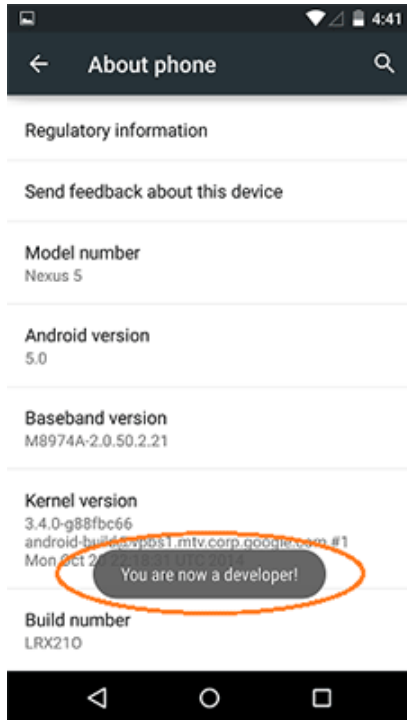

On Android 4.1 and lower, the **Developer options** screen is available by default.

On Android 4.2 and higher, you must enable this screen as follows:

1. Open the **Settings** app.
2. **(Only on Android 8.0 or higher)** Select **System**.
3. Scroll to the bottom and select **About phone**.
4. Scroll to the bottom and tap **Build number** 7 times.

5. Return to the previous screen to find **Developer options** near the bottom.
6. Scroll down a little and **enable USB debugging**.

7. When connecting the phone or tablet to the PC, a prompt will appear requesting to allow USB debugging. **Check** the “Always allow from this computer” box and tap **OK**.
